
NEUROPSYCHOLOGY RESOURCES

The Canadian Stroke Best Practice Recommendations state that experts in neurocognitive assessment may include neuropsychologist, psychologist, occupational therapist, speech language pathologist, clinical nurse specialist, psychiatrist, physiatrist, geriatrician, neurologist, memory specialists, and developmental pediatricians.

A clinical neuropsychologist conducts neuropsychological assessments on people who had strokes or other brain- behavior disorders. After a neuropsychological assessment, a number of areas of the brain that have been impaired or affected by the stroke are identified and an individualized treatment plan is developed. Treatment may include referral to a number of other disciplines (occupational therapy, speech- language therapy) and cognitive rehabilitation.

Please note that neuropsychology services are not covered by OHIP, but services provided by a registered psychologist may be covered by some extended health care plans.

How do you find a neuropsychologist in the area?

Ontario Psychological Association <http://www.psych.on.ca/Utilities/Find-a-psychologist.aspx>

College of Psychologists of Ontario https://members.cpo.on.ca/public_register/new
