

Aphasia

- A communication disorder that results from stroke, brain injury, or brain illness
- It may affect the ability to speak, understand, read, or write
- Only 5.7% of people surveyed in Canada had some knowledge of aphasia
- Please give me time to understand and respond

Thank you for taking the time to
communicate with me!

I had a stroke. I have **aphasia** and find it difficult to **understand, speak, read and write.**

Ways you can help me:

- Speak slowly; use simple sentences
- Repeat / rephrase what you said
- Write down the main words
- Give me time to understand and respond

Thank you for your patience!
